

LUNA 7.2.6 Release Notes

LUNA v7.2.6 is a release which includes support for full SSL and the addition of a value list in the Library editor. This release also fixes some bugs in the LUNA toolset.

Posted February 15, 2017

New Features in 7.2.6

- LUNA can now be configured to support full site SSL via the LUNA Installer. For clients with external content like LUNA Commons, AMICA and Archivision an option for mixed SSL is available.
- Improved autocomplete and implemented the option to display a value list in the Library's record editor for any field.
- Performance improvements for the Library.
- Implemented a way for the LUNA system to detect whether an e-mail address already exists when creating a new user account.

Bug Fixes in 7.2.6

- Fixed a bug to make the collection description in the Viewer display correctly on mobile devices.
- Fixed a bug in the Uploader that caused books to not finish processing when there was a trailing space character in book.properties file.
