

# LUNA Collection Manager

The Collection Manager is where you start your collection building process; it allows you to easily manage and edit data templates and collection properties.

After creating the collection properties and using the [LUNA Uploader](#) to add content to a collection the collection can be immediately viewed in the [LUNA Viewer](#). Any changes made to a collection are also immediately published.

There are only two tabs in the Collection Manager: Collections and Templates. With these 2 tabs you'll create and edit collection properties and work with data templates and schemata.

The screenshot shows the LUNA Collection Manager interface. At the top, there is a browser address bar with the URL `.lunaimaging.com:8181/editor/e/collection/LUNALIBRARY~5~5`. Below the browser, the page title is "LUNA Collection Manager" and the user is logged in as "anna". Navigation links include "Tools", "Edit Settings/Defaults", "Help", and "Log Out".

The interface has two tabs: "Collections" (selected) and "Templates". A "New Collection" button is visible. A list of collections is shown on the left, with "Exhibit A: the Ray Quick Archive" highlighted in yellow. The main form for editing this collection includes the following fields:

- Collection Name** (limit 50 characters): Exhibit A: the Ray Quick Archive
- Collection Description**: A large empty text area.
- Data Schema**: Based on the **Archive Template** template. [Edit schema.](#) [Help](#)
- Header Graphic**: [Upload Header Graphic](#) button. Or enter header graphic URL: [Help](#). The URL field contains `http://demo2.lunaimaging.com:8181/graphics/ExhibitA_header.jpg`.
- Luna Viewer Theme**: Default (dropdown menu)
- Title**: title (dropdown menu)

A "Save" button is located at the top right of the form area.
