

Soft Reset

Allows many changes to be made that used to require a server side reset. A soft reset clears all caches in the Viewer making recent changes appear without the need to restart LUNA tomcat on the server.

The screenshot shows the LUNA Administrator interface with a navigation menu at the top containing: Users, Access Permissions, Credentials, Collections, Application Configuration, Media Groups, Presentations, and a 'more' dropdown. The 'more' dropdown is open, showing options for IP Ranges, Extended Collection Properties, and Soft Reset. The 'Soft Reset' option is highlighted. Below the navigation, a form is displayed with the following content:

Run soft reset to refresh caches in the LUNA viewer. The following form is pre-populated with the values set in Application Configuration.

This action is only available to super admins.

Server Host:

Server Port:

Maintenance GUID:

Run

Reasons for Soft Reset Include the following:

Changes in the Administrator:

- Changing the Collection order
- IP range
- Application Configuration
- Changing ownership in Media groups and presentations
- Collection Properties
- Extended Collection Properties

Changes in Collection Manager:

- OAI mappings
- Relay button properties

Only users that have **Super Admin** can access the Soft Reset button in Administrator section.
