

LUNA 7.4.2 Release Notes

LUNA 7.4.2 is a release that includes enhancements and bug fixes:

Enhancements:

- Updated the BookReader in the LUNA Viewer which includes new styling, improved in-book search result page markers and support for phrase searching. We've also added a button in the Collection Manager to Rebuild Book Indexes for book objects that have been uploaded to LUNA prior to this 7.4.2 release.
- Improved PDF processing in Collection Manager so that it's no longer required to have a specialized PDF file to create a Book object.
- Refinements made to page numbering for BookReader objects in the LUNA Viewer and LUNAversal Viewer.
- Enhanced Sharing in the LUNA Viewer to support posting content to Twitter and FaceBook.
- Added the Relay Button to the LUNAversal Viewer.

Bug Fixes:

- Fixed a bug causing non-image files opened in LUNAversal to fail when data record is too long.
- Support alternate apostrophe character for searching in the LUNA Viewer.
- Optimized the Value List in the Library to improve speed, list accuracy and server load (requires rebuild of LUNA Library Index to see improvements).
