

# LUNA 7.1.2.7 & 7.1.2.8 Patch Release Notes

**Posted: February 3, 2015**

**LUNA 7.1.2.8** is a patch that fixes caching in the library to include the collection id with the imageid. This resolves a specific issue for Insight 6x collections migrated to LUNA 7.1, where images in the Library display the wrong record when same imageid exists in a different collection that has also been migrated to the system.

**LUNA 7.1.2.7** is a minor release that includes bug fixes.

- Fixed a bug that caused very large files to hang the server for a very long time.
- Fixed a bug to delete Temp files left behind after processing images.
- Fixed a bug where uploading a .CSV data file would occasionally result in an error message.
- Fixed a bug specific to the linking file and linking options in the Uploader that was causing significant slowness for very large collections.
- Improvements to JP2K file compression.
